

### Criterion 3.2.1

KNC has tried to create a sustainable ecosystem on innovation by creating robust systems in the form of various cells and formal bodies.

RISE-The Research, Innovation and Sustainable Education cell provides a platform to the undergraduate students to learn how to engage in research and to develop problem-solving, analytical thinking, resilience and time management skills under the mentorship of our motivated and skilled faculty members.

NURTURE, the Incubation Cell has undertaken a very successful 8 hour short course on 'Entrepreneur as a career' which included imparting knowledge on developing business ideas & its validation, obtaining angel funding and financial forecasts.

ASAR, The Entrepreneurship Cell (E-Cell) is persistently working to create a sense of social responsibility in our students particularly towards marginal sections of our society. With project 'Kadam' which has reached out to the cobbler community in order to generate business ideas for them ,ASAR has been contributing towards the ideology of creating 'Aatmanirbhar Bharat '.

In addition to these cells, with programmes Under National Skills Qualifications Framework(UGC), such as Certificate Course on Basics of Geographical Information system (GIS) ;Tourism and Travel Automation in partnership of Bird Academy,we strive to be a part of knowledge-based economy.
