BIODIVERSITY PROFILE OF KAMALA NEHRU COLLEGE

"In my maternal eye, the ridge was just a well-keeping place in the middle of the city with lots of shiny trees and bushes." - Divya Khatun

The world beautifully connects the dots behind our planet. This document also highlights the emerging awareness for how when it comes to understanding the surroundings. The result will a better understanding of the valuable aspects of our experience in this world to be successful results which we possess in the name of environmental protection. Just like a species is unable to thrive in human hands, there is an array of biodiversity and heritage. It's important for us to appreciate the environmental problems are at hand and work towards them. Let us all strive to derive large optimal solutions for their great times.

 (Plastic Pollution)

'BREAKUP' WITH PLASTIC

"He eats plastic food with a plastic knife and fork"

From toothbrush, shavers, soap case, bathtubs, hairbrush to chair, mats, toys, CD, clock to water bottle, tiffin, plate, cups, cans to plastic bags, gadgets, machines etc:
 Human in twenty first century is surrounded by plastic throughout the day and can't imagine a single day without it.

Meaning and definition of PLASTIC
 The scientific definition of plastic is – a material which is composed of various elements like carbon, hydrogen, oxygen etc. having high molecular weight, which signifies that each molecule can have thousands of atoms bound together.
 Simply plastic is a material made of variety of synthetic or semi-synthetic material that is malleable enough to be moulded into solid objects.

History of PLASTIC and how it is made
 Alexander Parkes was a metallurgist and an inventor from England, he created first man-made plastic called Parkesine. Plastics are derived from materials that are found in nature and mostly they are based on carbon atom, eg- natural gas, oil, coal, minerals and plants. The common process involves combination of petroleum distillates with specific catalysts to create novel and typically larger molecules.
