## **Learning Outcomes-based Curriculum Framework for Undergraduate**

### **Education**

#### **SECTION 1**

##### **1.1 Introduction**

A high priority task in the context of future education development agenda in India is fostering quality higher education. Further improvement of quality of higher education is considered critical for enabling effective participation of young people in knowledge production and participation in the knowledge economy, improving national competitiveness in a globalized world and for equipping young people with skills relevant for global and national standards and enhancing the opportunities or social mobility. Sustained initiatives are required for institutionalizing an outcome-oriented higher education system and enhancing employability of graduates through curriculum reform based on a learning outcomes-based curriculum framework, improving/upgrading academic resources and learning environment, raising the quality of teaching and research across all higher education institutions; technology use and integration to improve teaching-learning processes and reach a larger body of students through alternative learning modes such as open and distance learning modes and use of MOOCs. Other priority areas of action for fostering quality higher education include translation of academic research into innovations for practical use in society and economy, promoting efficient and transparent governance and management of higher education system, enhancing the capacity of the higher education system to govern itself through coordinated regulatory reform and increasing both public and private sector investment in higher education, with special emphasis on targeted and effective equity-related initiatives.

##### **1.2 Learning outcomes-based approach to curriculum planning and development**

The fundamental premise underlying the learning outcomes-based approach to curriculum planning and development is that higher education qualifications such as a Bachelor's Degree programmes are awarded on the basis of demonstrated achievement of outcomes (expressed in terms of knowledge, understanding, skills, attitudes and values) and academic standards expected of graduates of a programme of study. Learning outcomes specify what graduates completing a particular programme of study are expected to know, understand and be able to do at the end of their programme of study. The expected learning outcomes are used as reference points that would help formulate graduate attributes, qualification descriptors, programme learning outcomes and course learning outcomes which in turn will help in curriculum planning and development, and in the design, delivery and review of academic programmes. They provide general guidance for articulating the essential learnings associated with programmes of study and courses within a programme. It may be noted that the learning outcomes-based curriculum framework is not intended to promote designing of a national common syllabus for a programme of study or learning contents of courses within each programme of study or to prescribe a set of approaches to teaching-learning process and assessment of student learning levels. Instead, they are intended to allow for flexibility and innovation in (i) programme design and syllabi development by higher education institutions (HEIs), (ii) teaching-learning process, (iii) assessment of student learning levels, and (iv) periodic programme review within a broad framework

of agreed expected graduate attributes, qualification descriptors, programme learning outcomes and course learning outcomes.

The overall objectives of the learning outcomes-based curriculum framework are to:

- help formulate graduate attributes, qualification descriptors, programme learning outcomes and course learning outcomes that are expected to be demonstrated by the holder of a qualification;
- enable prospective students, parents, employers and others to understand the nature and level of learning outcomes (knowledge, skills, attitudes and values) or attributes a graduate of a programme should be capable of demonstrating on successful completion of the programme of study;
- maintain national standards and international comparability of learning outcomes

and academic standards to ensure global competitiveness, and to facilitate student/graduate mobility; and

- provide higher education institutions an important point of reference for designing teaching-learning strategies, assessing student learning levels, and periodic review of programmes and academic standards.

### **1.3 Key outcomes underpinning curriculum planning and development**

The learning outcomes-based curriculum framework for undergraduate education is a framework based on the expected learning outcomes and academic standards that are expected to be attained by graduates of a programme of study and holder of a qualification. The key outcomes that underpin curriculum planning and development at the undergraduate level include Graduate Attributes, Qualification Descriptors, Programme Learning Outcomes, and Course Learning Outcomes:

#### **1.3.1 Graduate attributes**

The graduate attributes reflect the particular quality and feature or characteristics of an individual, including the knowledge, skills, attitudes and values that are expected to be acquired by a graduate through studies at the higher education institution (HEI) such as a college or university. The graduate attributes include capabilities that help strengthen one's abilities for widening current knowledge base and skills, gaining new knowledge and skills, undertaking future studies, performing well in a chosen career and playing a constructive role as a responsible citizen in the society. The graduate attributes define the characteristics of a student's university degree programme(s), and describe a set of characteristics/competencies that are transferable beyond study of a particular subject area and programme contexts in which they have been developed. Graduate attributes are fostered through meaningful learning experiences made available through the curriculum, the total college/university experiences and a process of critical and reflective thinking. The learning outcomes-based curriculum framework is based on the premise that every student and graduate is unique. Each student or graduate has his/her own characteristics in terms of previous learning levels and experiences, life experiences,

learning styles and approaches to future career-related actions. The quality, depth and breadth of the learning experiences made available to the students while at the higher education institutions help develop their characteristic attributes. The graduate attributes reflect both disciplinary knowledge and understanding, generic skills, including global competencies, that all students in different academic fields of study should acquire/attain and demonstrate. Some of the characteristic attributes that a graduate should demonstrate areas follows:

- **Disciplinary knowledge:** Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate programme of study.
- **Communication Skills:** Ability to express thoughts and ideas effectively in writing and orally; Communicate with others using appropriate media; confidently share one's views and express herself/himself; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups.
- **Critical thinking:** Capability to apply analytic thought to a body of knowledge; analyze and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development.
- **Problem solving:** Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's learning to real life situations.
- **Analytical reasoning:** Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.
- **Research-related skills:** A sense of inquiry and capability for asking relevant/appropriate questions, problematising, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyse, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation.
- **Cooperation/Team work:** Ability to work effectively and respectfully with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a common cause and work efficiently as a member of a team.
- **Scientific reasoning:** Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence and experiences LOCF 4 from an open-minded and reasoned perspective.
- **Reflective thinking:** Critical sensibility to lived experiences, with self awareness and reflexivity of both self and society.
- **Information/digital literacy:** Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data.

- **Self-directed learning:** Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.
- **Multicultural competence:** Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.
- **Moral and ethical awareness/reasoning:** Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demonstrating the ability to identify ethical issues related to one's work, avoid unethical behavior such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.
- **Leadership readiness/qualities:** Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.
- **Lifelong learning:** Ability to acquire knowledge and skills, including „learning how to learn“, that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.

### 1.3.2 Qualification descriptors

A qualification descriptor indicates the generic outcomes and attributes expected for the award of a particular type of qualification (for eg. a bachelor's degree or a bachelor's degree with honours). The qualification descriptors also describe the academic standard for a specific qualification in terms of the levels of knowledge and understanding, skills and competencies and attitudes and values that the holders of the qualification are expected to attain and demonstrate. These descriptors also indicate the common academic standards for the qualification and help the degree-awarding bodies in designing, approving, assessing and reviewing academic programmes. The learning experiences and assessment procedures are expected to be designed to provide every student with the opportunity to achieve the intended programme learning outcomes. The qualification descriptors reflect both disciplinary knowledge and understanding as well as generic skills, including global competencies, that all students in different academic fields of study should acquire/attain and demonstrate.

**Qualification descriptors for a Bachelor's Degree programme:** The students who complete three years of full-time study of an undergraduate programme of study will be awarded a Bachelor's Degree. Some of the expected learning outcomes that a student should be able to demonstrate on completion of a degree-level programme may include the following:

- Demonstrate (i) a fundamental/systematic or coherent understanding of an academic field of study, its different learning areas and applications, and its linkages with related disciplinary areas/subjects; (ii) procedural knowledge that creates different types of professionals related to the disciplinary/subject

area of study, including research and development, teaching and government and public service; (iii) skills in areas related to one's specialization and current developments in the academic field of study.

- Use knowledge, understanding and skills required for identifying problems and issues, collection of relevant quantitative and/or qualitative data drawing on a wide range of sources, and their application, analysis and evaluation using methodologies as appropriate to the subject(s) for formulating evidence-based solutions and arguments;
- Communicate the results of studies undertaken in an academic field accurately in a range of different contexts using the main concepts, constructs and techniques of the subject(s);
- Meet one's own learning needs, drawing on a range of current research and development work and professional materials;
- Apply one's disciplinary knowledge and transferable skills to new/unfamiliar contexts, rather than replicate curriculum content knowledge, to identify and analyse problems and issues and solve complex problems with well-defined solutions.
- Demonstrate subject-related and transferable skills that are relevant to some of the job trades and employment opportunities.

#### **Qualification descriptors for a Bachelor's Degree with honours:**

The qualification descriptors for a Bachelor degree with honours may include the following:

- Demonstrate (i) a systematic, extensive and coherent knowledge and understanding of an academic field of study as a whole and its applications, and links to related disciplinary areas/subjects of study; including a critical understanding of the established theories, principles and concepts, and of a number of advanced and emerging issues in the field of study; (ii) procedural knowledge that creates different types of professionals related to the disciplinary/subject area of study, including research and development, teaching and government and public service; (iii) skills in areas related to one's specialization and current developments in the academic field of study, including a critical understanding of the latest developments in the area of specialization, and an ability to use established techniques of analysis and enquiry within the area of specialization.
- Demonstrate comprehensive knowledge about materials, including current research, scholarly, and/or professional literature, relating to essential and advanced learning areas pertaining to the chosen disciplinary areas (s) and field of study, and techniques and skills required for identifying problems and issues relating to the disciplinary area and field of study.
- Demonstrate skills in identifying information needs, collection of relevant quantitative and/or qualitative data drawing on a wide range of sources, analysis and interpretation of data using methodologies as appropriate to the subject(s) for formulating evidence-based solutions and arguments;
- Use knowledge, understanding and skills for critical assessment of a wide range of ideas and complex problems and issues relating to the chosen field of study.

- Communicate the results of studies undertaken in an academic field accurately in a range of different contexts using the main concepts, constructs and techniques of the subject(s) of study;
- Address one's own learning needs relating to current and emerging areas of study, making use of research, development and professional materials as appropriate, including those related to new frontiers of knowledge.
- Apply one's disciplinary knowledge and transferable skills to new/unfamiliar contexts and to identify and analyze problems and issues and seek solutions to real-life problems.
- Demonstrate subject-related and transferable skills that are relevant to some of the job trades and employment opportunities.

### 1.3.3 Programme learning outcomes

The outcomes and attributes described in qualification descriptors are attained by students through learning acquired on completion of a programme of study. The term 'programme' refers to the entire scheme of study followed by learners leading to a qualification. Individual programmes of study will have defined learning outcomes which must be attained for the award of a specific certificate/diploma/degree. The programme learning outcomes are aligned with the relevant qualification descriptors. Programme learning outcomes will include subject-specific skills and generic skills, including transferable global skills and competencies, the achievement of which the students of a specific programme of study should be able to demonstrate for the award of the certificate/Diploma/Degree qualification. The programme learning outcomes would also focus on knowledge and skills that prepare students for further study, employment, and citizenship. They help ensure comparability of learning levels and academic standards across colleges/universities and provide a broad picture of the level of competence of graduates of a given programme of study. A programme of study may be monodisciplinary, multi-disciplinary or inter-disciplinary. Some examples of programme learning outcomes for B.Sc (Physics) and Bachelor programme in Education are given in Section 2.

### 1.3.4 Course learning outcomes

The programme learning outcomes are attained by learners through the essential learning's acquired on completion of selected courses of study within a programme. The term 'course' is used to mean the individual courses of study that make up the scheme of study for a programme. Course learning outcomes are specific to the learning for a given course of study related to a disciplinary or interdisciplinary/multi-disciplinary area. Some programmes of study are highly structured, with a closely laid down progression of compulsory/core courses to be taken at particular phases/stages of learning. Some programmes allow learners much more freedom to take a combination of courses of study according to the preferences of individual student that may be very different from the courses of study pursued by another student of the same programme. Course-level learning outcomes will be aligned to programme learning outcomes. Course level learning outcomes are specific to a course of study within a given programme of study. The achievement by students of course-level learning

outcomes lead to the attainment of the programme learning outcomes. At the course level, each course may well have links to some but not all graduate attributes as these are developed through the totality of student learning experiences across the years of their study.

A course map would indicate the linkage between course learning outcomes and each programme learning outcome (Table 1). Some examples of course learning outcomes are indicated in Section 3.

Programme outcomes	Courses						
	Course1	Course2	Course...	Course..	Course...	Course..	Course..
Outcome 1	x	x	X	x	x	x	x
Outcome 2	x		X	x		x

Outcome..		x		x	x	x	
Outcome..	x		X		x		x
Outcome..	x		X		x	x	x
Outcome..		x		x		x	

#### 1.4 Teaching - learning process

The Learning Outcomes-Based Approach to curriculum planning and transaction requires that the teaching-learning processes are oriented towards enabling students to attain the defined learning outcomes relating to the courses within a programme. The outcomebased approach, particularly in the context of undergraduate studies, requires a significant shift from teacher-centric to learner-centric pedagogies, and from passive to active/participatory pedagogies. Planning for teaching therein becomes critical. Every programme of study lends itself to well-structured and sequenced acquisition of knowledge and skills. Practical skills, including an appreciation of the link between theory and experiment, will constitute an important aspect of the teaching-learning process. Teaching methods, guided by such a framework, may include: lectures supported by group tutorial work; practicum and field-based learning; the use of prescribed textbooks and e-learning resources and other self-study materials; open-ended project work, some of which may be team-based; activities designed to promote the development of generic/transferrable and subject-specific skills; and internship and visits to field sites, and industrial or other research facilities etc.

### 1.5 Assessment methods

A variety of assessment methods that are appropriate to a given disciplinary/subject area and a programme of study will be used to assess progress towards the course/programme learning outcomes. Priority will be accorded to formative assessment. Progress towards achievement of learning outcomes will be assessed using the following: time-constrained examinations; closed-book and open-book tests; problem based assignments; practical assignment laboratory reports; observation of practical skills; individual project reports (case-study reports); team project reports; oral presentations, including seminar presentation; viva voce interviews; computerised adaptive testing; peer and self assessment etc. and any other pedagogic approaches as per the context .

## Programme learning outcomes relating to bachelor degree in Sanskrit

### B.A.(Hons.)

For centuries Sanskrit has been the repository of Indian wisdom. In the ancient period of her history itself, India had made significant strides in several areas of knowledge production. She had a rich tradition of philosophy and religion along with major achievements in logic, mathematics, law, medicine, literature, dramatics, agricultural sciences, marine technology and many crafts and trades.

Prior to the imposition of the colonialist agenda by British imperialists, these subjects were being taught in Indian schools and universities. However, these subjects were replaced with western knowledge systems under the Education policies pursued by the British government.

In the twenty first century, the Euro –centric approach is being challenged and it is being increasingly recognized that Asian and especially Indian knowledge systems need to be revived and used for the betterment of humankind. As the principal medium of all intellectual advancements in India, Sanskrit needs to be given a pride of place in the scheme of studies. India’s Education policies of 1968 and 1986 declare that ‘more liberal facilities’ must be provided for the study of Sanskrit in universities.

Sanskrit is offered in different forms as an Honours course where students read at least twenty papers in Sanskrit; as a Programme course where students study lesser number of papers in Sanskrit ; as a Generic Elective subject for students from other disciplines.

The Sanskrit Honours and Programme syllabus has a two pronged objective – to introduce students to a variety of traditional disciplines in Sanskrit studies and to strengthen their knowledge of the language.

When students come from school to College, the level of difficulty both in terms of the language and content rises dramatically. Therefore, the Sanskrit Honours Course aims to train them in classical Sanskrit in which major works on various disciplines are written. It is also aims to train them in important traditional disciplines which may be put under the category of humanities. These are - Vedic studies ; the huge volume of literature – prose, poetry and drama which have inspired and continue to inspire great literary works in almost all Indian languages; literary criticism or kavya Shastra; vyakarana which covers a large area of linguistics; darshana i.e. philosophy and logic; dharma Shastra which covers many areas of sociology and legal studies.

The syllabus also realizes that Sanskrit has been the language of governance for centuries and therefore several ruling dynasties and even private entities got their inscriptions written in Sanskrit. These inscriptions are extremely important for the study of Indian history, paleography and chronology. These find place in various forms in this syllabus.

This course also seeks to introduce certain non technical aspects of scientific disciplines - the Indian system of medicine, mathematics and astronomy.

The Honours course will especially focus on issues which have a contemporary resonance. It will seek to enrich our modern understanding of these issues with traditional Indian wisdom. It will combine traditional wisdom with modern studies and research in these various disciplines in India and abroad. In most courses an attempt will be made to expose students to e-resources and help them to use them fruitfully.

The Honours course will thus make students better equipped to pursue their post graduate studies and undertake further research in these disciplines.

The BA Programme in Sanskrit is less ambitious in range and level of difficulty. It offers limited courses in literature and language. Students pursuing the BA Programme course will also get the opportunity to read some Generic Courses in Sanskrit where the emphasis will be more on introducing domain knowledge than language studies.

**Background/Preamble:**

Ministry of Human Resource Development (HRD), Govt. of India, has already initiated the process for developing New Education Policy (NEP) in our country to bring out reforms in Indian education system. University Grants Commission (UGC) participates more actively in developing National Education Policy, its execution and promotion of higher education in our country. The UGC has already initiated several steps to bring equity, efficiency and academic excellence in National Higher Education System. The important ones include innovation and improvement in course- curricula, introduction of paradigm shift in learning and teaching pedagogy, examination and education system.

The education plays enormously significant role in building of a nation. There are quite a large number of educational institutions, engaged in imparting education in our country. Majority of them have entered recently into semester system to match with international educational pattern. However, our present education system produces young minds lacking knowledge, confidence, values and skills. It could be because of complete lack of relationship between education, employment and skill development in conventional education system. The present alarming situation necessitates transformation and/or redesigning of education system, not only by introducing innovations but developing “learner-centric approach in the entire education delivery mechanism and globally followed evaluation system as well.

Majority of Indian higher education institutions have been following marks or percentage based evaluation system, which obstructs the flexibility for the students to study the subjects/courses of their choice and their mobility to different institutions. There is need to allow the flexibility in education system, so that students depending upon their interests and aims can choose inter-disciplinary, intra-disciplinary and skill-based courses. This can only be possible when choice based credit system (CBCS), an internationally acknowledged system, is adopted. The choice based credit system not only offers opportunities and avenues to learn core subjects but also exploring additional avenues of learning beyond the core subjects for holistic development of an individual. The CBCS will undoubtedly facilitate us bench mark our courses with best international academic practices. The CBCS has more advantages than disadvantages.

**Advantages of the choice based credit system:**

- Shift in focus from the teacher-centric to student-centric education.
- Student may undertake as many credits as they can cope with (without repeating all courses in a given semester if they fail in one/more courses).
- CBCS allows students to choose inter-disciplinary, intra-disciplinary courses, skill oriented papers (even from other disciplines according to their learning needs, interests and aptitude) and more flexibility for students).
- CBCS makes education broad-based and at par with global standards. One can take credits by combining unique combinations. For example, Physics with Economics, Microbiology with Chemistry or Environment Science etc.

- CBCS offers flexibility for students to study at different times and at different institutions to complete one course (ease mobility of students). Credits earned at one institution can be transferred.

**Disadvantages:**

- Difficult to estimate the exact marks
- Workload of teachers may fluctuate
- Demand good infrastructure for dissemination of education

### **Choice Based Credit System (CBCS):**

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it is necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions within India to begin with and across countries. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations, the UGC has formulated the guidelines to be followed.

### **Outline of Choice Based Credit System:**

1. **Core Course:** A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.
2. **Elective Course:** Generally a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/subject of study or which provides an extended scope or which enables an exposure to some other discipline/subject/domain or nurtures the candidate's proficiency/skill is called an Elective Course.
  - 2.1 **Discipline Specific Elective (DSE) Course:** Elective courses may be offered by the main discipline/subject of study is referred to as Discipline Specific Elective. The University/Institute may also offer discipline related Elective courses of interdisciplinary nature (to be offered by main discipline/subject of study).
  - 2.2 **Dissertation/Project:** An elective course designed to acquire special/advanced knowledge, such as supplement study/support study to a project work, and a candidate studies such a course on his own with an advisory support by a teacher/faculty member is called dissertation/project.
  - 2.3 **Generic Elective (GE) Course:** An elective course chosen generally from an unrelated discipline/subject, with an intention to seek exposure is called a Generic Elective.  
P.S.: A core course offered in a discipline/subject may be treated as an elective by other discipline/subject and vice versa and such electives may also be referred to as Generic Elective.
3. **Ability Enhancement Courses (AEC)/Competency Improvement Courses/Skill Development Courses/Foundation Course:** The Ability Enhancement (AE) Courses may be of two kinds: AE Compulsory Course (AECC) and AE Elective Course (AEEC). "AECC" courses are the courses based upon the content that leads to Knowledge enhancement. They ((i) Environmental Science, (ii) English/MIL Communication) are mandatory for all disciplines. AEEC courses are value-based and/or skill-based and are aimed at providing hands-on-training, competencies, skills, etc.
  - 3.1 AE Compulsory Course (AECC): Environmental Science, English Communication/MIL Communication.
  - 3.2 AE Elective Course (AEEC): These courses may be chosen from a pool of courses designed to provide value-based and/or skill-based instruction.

**Project work/Dissertation** is considered as a special course involving application of knowledge in solving / analyzing /exploring a real life situation / difficult problem. A Project/Dissertation work would be of 6 credits. A Project/Dissertation work may be given in lieu of a discipline specific elective paper.

### Implementation:

1. The CBCS may be implemented in Central/State Universities subject to the condition that all the stakeholders agree to common minimum syllabi of the core papers and at least follow common minimum curriculum as fixed by the UGC. The allowed deviation from the syllabi being 20 % at the maximum.
2. The universities may be allowed to finally design their own syllabi for the core and elective papers subject to point no. 1. UGC may prepare a list of elective papers but the universities may further add to the list of elective papers they want to offer as per the facilities available.
3. Number of Core papers for all Universities has to be same for both UG Honors as well as UG Program.
4. Credit score earned by a student for any elective paper has to be included in the student's overall score tally irrespective of whether the paper is offered by the parent university (degree awarding university/institute) or not.
5. For the introduction of AE Courses, they may be divided into two categories:
  - a) AE Compulsory Courses: The universities participating in CBCS system may have common curriculum for these papers. There may be one paper each in the 1<sup>st</sup> two semesters viz. (i) English/MIL Communication, (ii) Environmental Science.
  - b) AE Elective Courses: The universities may decide the papers they may want to offer from a common pool of papers decided by UGC or the universities may choose such papers themselves in addition to the list suggested by UGC. The universities may offer one paper per semester for these courses.
6. The university/Institute may plan the number of seats per elective paper as per the facility and infrastructure available.
7. An undergraduate degree with honours in a discipline may be awarded if a student completes 14 core papers in that discipline, 2 AE Compulsory Courses, minimum 2 AE Elective Courses and 4 papers each from a list of discipline specific elective and generic elective papers respectively.
8. An undergraduate program degree may be awarded if a student completes 4 core papers

each in three disciplines of choice, 2 AE Compulsory Courses, minimum 4 AE Elective Courses and 2 papers each from a list of discipline specific elective papers based on three disciplines of choice selected above, respectively.

9. The credit(s) for each theory paper/practical/tutorial/project/dissertation will be as per the details given in A, B, C, D for B.Sc. Honours, B.A./B.Com. Honours, B.Sc. Program and B.A./B.Com. Program, respectively.

10. The Universities/Institutes may offer any number of choices of papers from different disciplines under Generic Elective and Discipline Specific Elective as per the availability of the courses/faculty.

11. Universities/Institutes should evolve a system/policy about Extra Curricular Activities/ General Interest and Hobby Courses/Sports/NCC/NSS/related courses on its own.
12. A student can opt for more number of Elective and AE Elective papers than proposed under the model curriculum of UGC. However the total credit score earned will not exceed 160 credits for UG Honours and 140 credits for UG Program degree.
13. The new scheme of UG courses should be given due consideration while framing the admission eligibility requirement for PG/ Technical courses in Indian Universities/Institutions to ensure that students following inter and multi-disciplinary format under CBCS are not at a disadvantage. It may be suggested that obtaining 24 credits in a particular discipline may be considered as the minimum eligibility requirement for admission to PG/ Technical courses in Indian Universities/Institutions.

**Conversion of credit(s) into grade(s): The following illustrations could be taken as an example for computing SGPA and CGPA from credits for Honours courses in all disciplines, degree Program courses in Science subjects and degree Program courses in Humanities, Social Sciences and Commerce subjects:**

### 1. Grades and Grade Points

Letter Grade	Grade Point
O (Outstanding)	10
A+(Excellent)	9
A (Very Good)	8
B+(Good)	7
B (Above Average)	6
C (Average)	5
P (Pass)	4
F (Fail)	0
Ab (Absent)	0

1. A student obtaining Grade F shall be considered failed and will be required to reappear in the examination.
2. For non credit courses 'Satisfactory' or "Unsatisfactory' shall be indicated instead of the

letter grade and this will not be counted for the computation of SGPA/CGPA.

3. The Universities can decide on the grade or percentage of marks required to pass in a course and also the CGPA required to qualify for a degree taking into consideration the recommendations of the statutory professional councils such as AICTE, MCI, BCI, NCTE etc.,
4. The statutory requirement for eligibility to enter as assistant professor in colleges and universities in the disciplines of arts, science, commerce etc., is a minimum average mark of 50% and 55% in relevant postgraduate degree respectively for reserved and general category. Hence, it is recommended that the cut-off marks for grade B shall not be less than 50% and for grade B+, it should not be less than 55% under the absolute grading system. Similarly cut-off marks shall be fixed for grade B and B+ based on the recommendation of the statutory bodies (AICTE, NCTE etc.,) of the relevant disciplines.

**[E] Teaching Learning Process**

Teachers will explain the contents of the text and involve students in the discussion on relevant issues. Caste and women's issues must be highlighted through newspaper reports and leading cases. Examination questions should be so framed as to focus on contemporary problems.

While reading the sections on polity students must be encouraged to connect their study of theory with how international diplomacy is being conducted today, particularly in India's neighbourhood. A case study based approach may be encouraged. News items, articles and opeds on foreign policy and governance issues must be studied as a part of the course and examination questions should require a thorough reading of these articles.

**[A] Course Objectives:**

This course intends to provide students the knowledge of inscriptions in India through the ages. They get to study the development of various scripts including Brahmi and Kharoshthi used in ancient India. The course will further help students to co-relate various historical facts, chronology, literary elements and other information contents available in the inscriptions.

**[B] Course Learning Outcomes:**

This course will equip students with the necessary tools for the study of Indian inscriptions. They will learn ancient scripts and use their knowledge in studying more inscriptions later. Students will be able to read, collate and interpret inscriptions to reconstruct history. Thus, it will be useful for students who are interested in pursuing advance study in archaeology.

**[A] Course Objectives:**

This course on Vedic literature aims to introduce three Vedic Saṁhitās and Vedic Grammar to Bachelor Degree students. Students will also be able to read and know about the contents of one famous Upaniṣad, namely, Muṇḍaka Upaniṣad, which propounds basic Vedānta-view. It will also facilitate the students to know about philosophical, moral, and scientific principles including the source of Indian Intellectual traditions of Vedic period .

**[B] Course Learning Outcomes:**

By reading these texts, students will have an impression of the depth of Vedic knowledge and will be able to realize that ideas of Vedic seers are based on philosophical, moral, and scientific principles.

By understanding them, students will be able to know and achieve some higher attributes from Vedic heritage about our culture, morals, and thoughts. Thus they may develop curiosity to know more about other Vedic texts and concepts as well.

After completing this course students will surely be able to communicate about some important Vedic verses with their meaning and teaching, and thus fundamentals of religious life of India will be revealed to them in its true form.

Students will understand the strength of Unity, power of mind, and will realize the importance of earth in their life. From the study of *Upaniṣad* they will know about philosophical and Psychological insights of our ancestors and can develop this learning further for the benefit of themselves in particular and society in general.

**(12131502)**

**Max. Marks : (75+ 25 = 100)**

**Credits : Lectures 60 + Tutorials 12**

**[A] Course Objectives:**

Sanskrit is much known for a long tradition of grammatical and semantic analysis of the language. Panini's grammar has always been highly respected for providing the best model for structural and semantic studies. This course intends to introduce to students the basic structure of Sanskrit language through the the Laghusiddhantakaumudi , the premier text of Sanskrit grammar by Varadaraj.

**[B] Course Learning Outcomes:**

After completion of this course students will understand the basic structural nuances of Panini's grammar. They will become familiar with fundamental sandhi and compounding patterns. They will also understand some most important primary and secondary suffixes of Sanskrit. The practice of the application of the rules learnt from the reading of the texts will further enhance their knowledge of the structural patterns of Sanskrit language.

**DSE-2****Art of Balanced Living****(12137902)****[A] Course Objectives:**

The course aims to make students aware of the importance of balance in life and to make them aware of the theoretical and practical aspects of Balanced Living inherent in Sanskrit texts and apply them to live a better life. Graduates who read this course should be able to see that in order to bring balance in life, a proper understanding one's life situation is necessary. For this understanding, shravana manana and nididhyasana are important tools.

Graduates must know the true essence of listening (acquisition of information) manana (reflection) and nididhyasana (unflinching commitment). In this segment students can learn how to improve concentration. They will be able to identify the causes for indecisiveness and confusion and will learn how emotional stability can lead to clearer thinking. This section should help students to understand the importance of Ashtang yoga and Kriyayoga for the purification mind. Team work and social cohesion require inter personal skills. One needs to know that one's behaviour can create conflicts. Learners should know how to improve their behaviour through jnana, dhyan, karma and bhakti yoga. Student should learn how active engagement with action is most conducive to healthy and successful living. By reading this segment, learners should develop a more balanced approach to life.

**Computational Linguistics for Sanskrit**  
**(12137907)**

**[A] Course Objectives:**

This course will introduce the modern technology in the field of computational linguistics and language technology and prepare the students for next level. After covering these topics in Computational Linguistics (CL), the students will learn the tools and techniques of CL and also do the detailed survey and learn various methodologies used in the field.

**[B] Course Learning Outcomes:**

The course-level learning outcomes that a student of this course is required to demonstrate are indicated below:

- Learn the basic concept of Theoretical Concepts of Computational Linguistics.
- Learn the basic concept various Applied Areas of Computational Linguistics e.g. Morphological Analyzer/Speech/Speaker Recognition, Speech Synthesis, Text to Speech, Language Analysis, Understanding, Generation, Natural Language Interface, Text Processing and Machine Translation etc.
- Learn the basic concept of databases for data Storage.
- Student also learn the Survey of Computational Linguistics.

**[C] Contents for Each Course**

### **[E] Teaching Learning Process:**

As a programme of study in Sanskrit is designed to encourage the acquisition of disciplinary/subject knowledge, understanding skills, academic and professional skills required for Sanskrit and language based professions and jobs, learning experiences should be designed and implemented to foster active/participate learning. Development of practical skills will constitute an important aspect of the teaching-learning process. A variety of approaches to teaching-learning process, including lectures, seminars, tutorials, workshops, peer teaching and learning and project-based learning, field-based learning, substantial laboratory-based practical component and experiments in this course, open-ended project work, games, technology-enabled learning, internship in industry and research establishments etc. will need to be adopted to achieve this. Lecture based Teaching Learning on the Basics of Tools and Techniques for Computing Sanskrit Language, Detailed Survey of Language Computing tools and Techniques for Background will be covered in this course. It will be very helpful to students to engage them in laboratory and practice basic tools and techniques of computer. The 6 E's and S (Engage, Explore, Explain, Elaborate, Evaluate, Extend, and Standards) lesson plan format may be developed by teachers based on a constructionist model of teaching.

### **[G] Assessment :**

The assessment of students' achievement in Computational Linguistics for Sanskrit will be aligned with the course/programme learning outcomes and the academic and professional skills

that the programme is designed to develop. A variety of assessment methods that are appropriate within the disciplinary area of Computational Sanskrit will be used. Learning outcomes will be assessed using the following: oral and written examinations, problem-solving exercises, practical assignment, observation of practical skills, individual project reports, seminar presentation; viva-voce interviews; computerized adaptive testing, literature surveys and evaluations, outputs from collaborative work, portfolios on chemical activities undertaken etc.

**Internal Assessment:**

As an Internal Assessment the periodic tests from each unit; should have written and oral component including paper presentation and group discussion.

On the place of internal assessment, project on e-lexicon development, e-corpora creation, database for cultural heritage and search engine for Sanskrit text, digitizing Sanskrit text may be done for the testing the computational skill of the students.

Lab practice of database may be done time to time

**Fundamentals of Āyurveda**  
**(12137908)**

---

**[A] Course Objectives:**

Āyurveda is the most ancient but alive traditional healthcare system in India. Through the classroom lectures and discussions, this course will introduce students to the theory of Āyurveda. The major objective is to make them understand the basic principles and concepts of preventative and curative medicines, health maintenance, diet and nutrition, usage of commonly used spices and herbs and therapeutic procedures in Āyurveda

**[B] Course Learning Outcomes:**

Graduates who read this course should be able to know the ancient tradition of Indian Medicine system, which has focused not only to the physical health but a healthy lifestyle.

After reading this paper students will know the history of Āyurveda through original sources of ancient medicine system enshrined in Sanskrit texts like Charaka Saṁhitā, Śuśruta Saṁhitā, Aṣṭāṅga Hṛdaya etc. and they will also get the basic knowledge of eight departments of Āyurveda.

Second section of this paper is related to ancient physiology. In this section students will get acquainted with the basic concept of Trigūṇa, Pañcamahābhūtas, Tridoṣas, Saptadhātus, Trayodosāgni, Trimalas, SvasthaVṛtta etc. which will help students to develop Āyurvedic understanding of lifestyle and concepts of preventive medicine. Āyurveda prescribes different food habits in different seasons. After reading this section students will be able to understand seasonal regimen & social conduct and its effect on health. It will develop their understanding of Health and Disease as explained in Āyurveda, and the way of diagnosing the illness.

Taittirīyopaniṣad - Bhṛḡuvalli will be taught in the third section of this paper. Our Ṛṣis were not only concerned about the physical health of individuals but also about the holistic health i.e. including mental, social and spiritual well being. By reading this portion of Upaniṣad student would develop a more balanced approach towards life.

(12137906)****[A] Course Objectives:**

The main objective of this course is to make the students acquainted with the basic concept of Indian Environmental Science and salient features of environmental awareness as reflected in Vedic and Classical Sanskrit literature.

The National culture of every country depends on its environmental and climatic conditions and human behavior towards natural resources. Nature- friendly thoughts in Sanskrit Literature have benefited human race for long. Many religious practices were framed by ancient thinkers as a tool to protect nature and natural resources.

**[B] Course Learning Outcomes:**

After completing this course, students will realize that they are a part of nature and nature belongs to all creatures; therefore, they should be more careful about the utilization and preservation of natural resources. This will make them better citizens of the world.

**[A] Course Objectives:**

This paper is designed to introduce nuances of Indian culture to students and to show how cultural traditions have evolved. The paper also engages them in debates about certain significant socio-cultural issues.

**[B] Course Learning Outcomes:**

The first unit of this section aims at the basic understanding of culture and civilization at large dimensions, on the basis of which they will be able to evaluate Indian culture in modern terminologies.

The second unit deals with evolution of Indian culture through different ages from ancient times to the modern age with the symbiosis of alien elements e.g. Islamic and other foreign traditions.

The third unit aims at highlighting the undercurrent of Sanskrit-led culture in vernacular as well as urban shades of cultural life. By studying this course a student will be able to perceive India's various cultural identities as enriched by Sanskrit language and literature. In this section the student would be acquainted with the fundamental principles of indigenous law and statutes from original Sanskrit sources e.g. Mahabharata, Manusmriti, Yajñvalkyā Smṛiti etc. The student will also be able to understand the status and rights of women in ancient Indian society. They will be aware the elasticity and adaptability of Hindu code of conduct as its essential quality, with the change and demand of time. This section would inculcate among the students the capability of debating and ways of arousing valid questions within and to the tradition and find out the efficient answer to cope up with the modern problems.

**[A] Course Objectives:**

The objective of the Syllabus is to study the basic issues in Indian Philosophy.

**[B] Course Learning Outcomes:**

Indian Philosophy teaches critical thinking, close reading, clear writing, and logical analysis. It develops the tools of logic and reason to analyze the ways in which the individual experiences the Universe. It guides the student to understand the language we use to describe the world, and our place within it. Different areas of philosophy are distinguished by the questions they ask. The most important reason to study philosophy is that it is of enormous and enduring interest. Philosophy is important, but it is also enormously enjoyable in which students are provided with the tools and the opportunity to develop and express their own philosophical views.

**Ancient Indian Polity**  
**(12135906)**

---

**[A] Course Objectives:**

The aim of this course is to make students acquainted with various aspects of Political institutions and Indian polity as propounded in ancient Sanskrit texts from vedic samhitās to later texts in the dharma śāstra and artha śāstra traditions.

**[B] Course Learning Outcomes:**

Learning Outcome : This course is designed for UG students who are from disciplines other than main Sanskrit discipline . It should be a great opportunity for these students to understand the nature of ancient Indian polity from original Sanskrit sources from Vedic texts to Dharma shastra and Niti texts.

In this section students will be able to understand various types of states in ancient India. They should know that despite of monarchy as prime form of governance, there was also a parallel republican system. With the study of the Saptanga theory of ancient Indian polity, students will be able to learn how the state is an organic entity and how optimum functioning of each organ is necessary for the smooth functioning of the whole.

Upon reading this section, students are expected to appreciate the well designed administrative structure of ancient India. They should be able compare ancient and contemporary models. They will know that despite a monarchical system, sovereign was not autocratic. He was well controlled by his subordinates.

This section deals with internal and external security and financial growth of the state. Students will be able to understand various aspects of ancient law, justice, taxation and diplomacy.

The study of these sections must enable students to connect this theoretical model with contemporary governance issues in India. The shadguna and mandala theories provide a practical and pragmatic understanding of foreign relations and tell how international diplomacy is to be conducted.

(12135908)****[A] Course Objectives:**

This course known as the Indian Epigraphy and Palaeography provides background and basis of Indian history of ancient period. Students with no knowledge of Sanskrit but interested in acquiring historical facts direct from their source can be benefitted with this course. It is extremely helpful for those who are willing to involve in archaeological studies.

This course provides basics covered in ancient Indian inscriptions. Some of the terminologies available in inscriptions are introduced here. Unit II of this section provides historical facts through the inscriptions.

It introduces background of the Indian epigraphical study. Importance of inscriptions on the basis of contents, their impact and reflections of society, economy, religious, political instances can also be understood here. It helps to understand about prevailing theories of the origin of the Brahmi script. Development of the letters of this script in different regions in a span of time is introduced. Their causes of change are also made clear to illustrate different forms in the script. Unit III provides the history of study of inscriptions in India. A number of Indian and foreign scholars made attempts in this field. Students are made aware about some prominent scholars who made valuable efforts in this field.

**[B] Course Learning Outcomes:**

Contents of this course are related to formation of history of ancient India, so it is an interdisciplinary course within Sanskrit. Students of Sanskrit can understand how important role Sanskrit based inscriptions play in preparing history, and their knowledge of the language can help historians to make a perfect history, undoubtedly. Similarly students of History will find themselves on the positive ground and direct in touch with material related to history of ancient India.

Course of Epigraphy & script is an inter-disciplinary course within Sanskrit. The Brahmi script used in Indian inscriptions was developed into all modern Indian scripts like Tamil, Malayalam, Oriya, Bangali, Gurmukhi, among others. Study of inscriptions written mostly in Sanskrit languages, helps in preparation of ancient history.

It will provide introduction to the earlier forms of the Brahmi script, found in the Ashokan epigraphs, widely used all over India. Writing style, writing material and method of writing which led to variations and transformation in the Brahmi script will be studied to help students to interpret the causes that paved way to changes in it in different times and places. Students will acquaint with earlier examples of variations in the Brahmi script which developed into modern Indian scripts. More-over most of the South-East Asian countries also have a clear impact of the developed form of the Brahmi script, especially of the Grantha form of it.

**[B] Course Learning Outcomes:**

This course is helpful for students to investigate how actually Brahmi script developed and transformed into a wide variety at a time when mode and means of transport and communication were extremely slow. After acquiring knowledge of its variation, it will certainly be helpful in ascertaining to understand period of an inscription whose date is uncertain. This course is highly helpful for the students willing to adopt archaeology as their occupation with a background of Sanskrit.

**[E] Teaching Learning Process**

1. Teachers are supposed to illustrate variations of the Brahmi script through different charts. These charts are easily available in the books written by Buhler and G.H.Ojha. Students should be taken to the museums, as such charts are available there.
2. The kutila variety may also be introduced to the students as it paved way for different styles especially in North India.
3. A variety of approaches to teaching-learning process, including lectures, seminars, tutorials, workshops, peer teaching and learning, practicum and project-based learning, field-based learning in this course. Problem-solving skills and higher-order skills of reasoning and analysis will be encouraged through teaching strategies. Lecture based Teaching Learning on the Sanskrit literature will be covered in this course.

**[B] Course Learning Outcomes:**

The course-level learning outcomes that a student of this course will be able to demonstrate are indicated below:

- Learn the origin and Development of Machine Translation
- Basic Introduction of Machine Translation
- Human vs Machine Translation
- Concepts to ideal various methodologies used on Machine Translation System.
- Using guidelines of the Machine Translation system : Google and Bing
- Evaluation and Challenges in Machine Translation

**(12133904)**

**Max. Marks : (75+ 25 = 100)**

**Credits : Lectures 24 + Tutorials 12**

**[A] Course Objectives:**

This course aims to acquaint students with the myth that Indians lacked knowledge of writing in ancient period. Available sources suggest that writing was mostly practiced on perishable material, so limited evidences are available to prove that practice of writing in India was widely known. Despite that Indians had relation with foreign countries there was a sleek chance that they borrowed any scripts from them.

A script develops from various types of symbols used to express writing. Indus valley script, a picto-ideographic script may have been developed as a grammatically perfect script in India. This section suggests to undergo research in linking proto Indian & ancient Indian Brahmi and Kharoshthi scripts.

Impact of time and space led the Brahmi to undergo variations. Their causes in changes in writing will be studied.

**[B] Course Learning Outcomes:**

Students willing to engage in archaeology can be enlightened about the importance and background of written material and utilize it in future.

Study of scripts are useful to evaluate and understand believes of prevailing contemporary multiple contents. After undergoing this course Students will be able utilize relevant information to develop capability to fix a date of an unknown writing, incidents, etc., with co-relating it to the available similar writing, and somewhat continuing incidents. Thus, it becomes helpful and useful for the students who are interested in pursuing advance study in archaeology.
